This field has made exciting discoveries that shed light on how organic compounds came together to form self-replicating molecules--the origin of life. This volume updates that progress and offers recommendations on research programs--including an ambitious effort centered on Mars--to advance the field over the next 10 to 15 years. The book presents a wide range of data and research results on these and other issues: \* The biogenic elements and their interaction in the interstellar clouds and in solar nebulae. \* Early planetary environments and the conditions that lead to the origin of life. \* The evolution of cellular and multicellular life. \* The search for life outside the solar system.
